

*Situation report period covered - 10 June - 23 June 2022*

*This report provides an update of the African swine fever (ASF) situation, according to the information submitted through the World Animal Health Information System of the World Organisation for Animal Health (WAHIS) between 10 June and 23 June 2022.*

The information included in this report was reported by countries through Immediate notifications (IN), follow-up reports (FUR) and six-monthly reports (SMR). More details on the data collection for listed diseases are available on our [website](#).

This report will cover: (1) the recent updates that occurred during the 2-week period of 10 June – 23 June 2022 (based on INs and FURs), (2) new events which started before the 2-week period

**Recent updates (10/06/2022 – 23/06/2022)**

To describe the current disease situation of ASF, this section covers: (a) a list of new events which started during the 2-week period (reported through INs); (b) information on events that started before the 2-week period but were still ongoing during the period (reported through FURs); (c) new events which started before the 2-week period but were reported through INs during the 2-week period and (d) the geographic distribution of new outbreaks that started during the 2-week period. This information is based on INs and FURs received by WOA. The outbreaks are displayed on a map in Figure 1.

**New events by world region (reported through INs)**

(see Figure 2)

Africa, Americas, Asia, Oceania

No new events reported

Europe

Recurrence in the country in Moldova started on 19 June

Recurrence in the country in Ukraine started on 14 June and 19 June

**On-going events for which there were new outbreaks, by world region (reported through FURs)**

(see Figure 2):

Africa, Americas, Asia, Oceania

No ongoing events updated

Asia

One country updated its ongoing events: Thailand

Europe

Three countries updated their ongoing events: Hungary, Italy, Latvia, Moldova and Romania.

### Recent updates outside reporting period

Events, reported through INs, which started before the 2-week reporting period, but after the reporting period of the previous situation report are listed here to capture any new events whose outbreaks would not be captured otherwise.

#### New events by world region (reported through INs) which started before the reporting period

Africa, Americas, Asia, Oceania

No new events reported

Europe

Recurrence of the disease in Russia started on 09 June

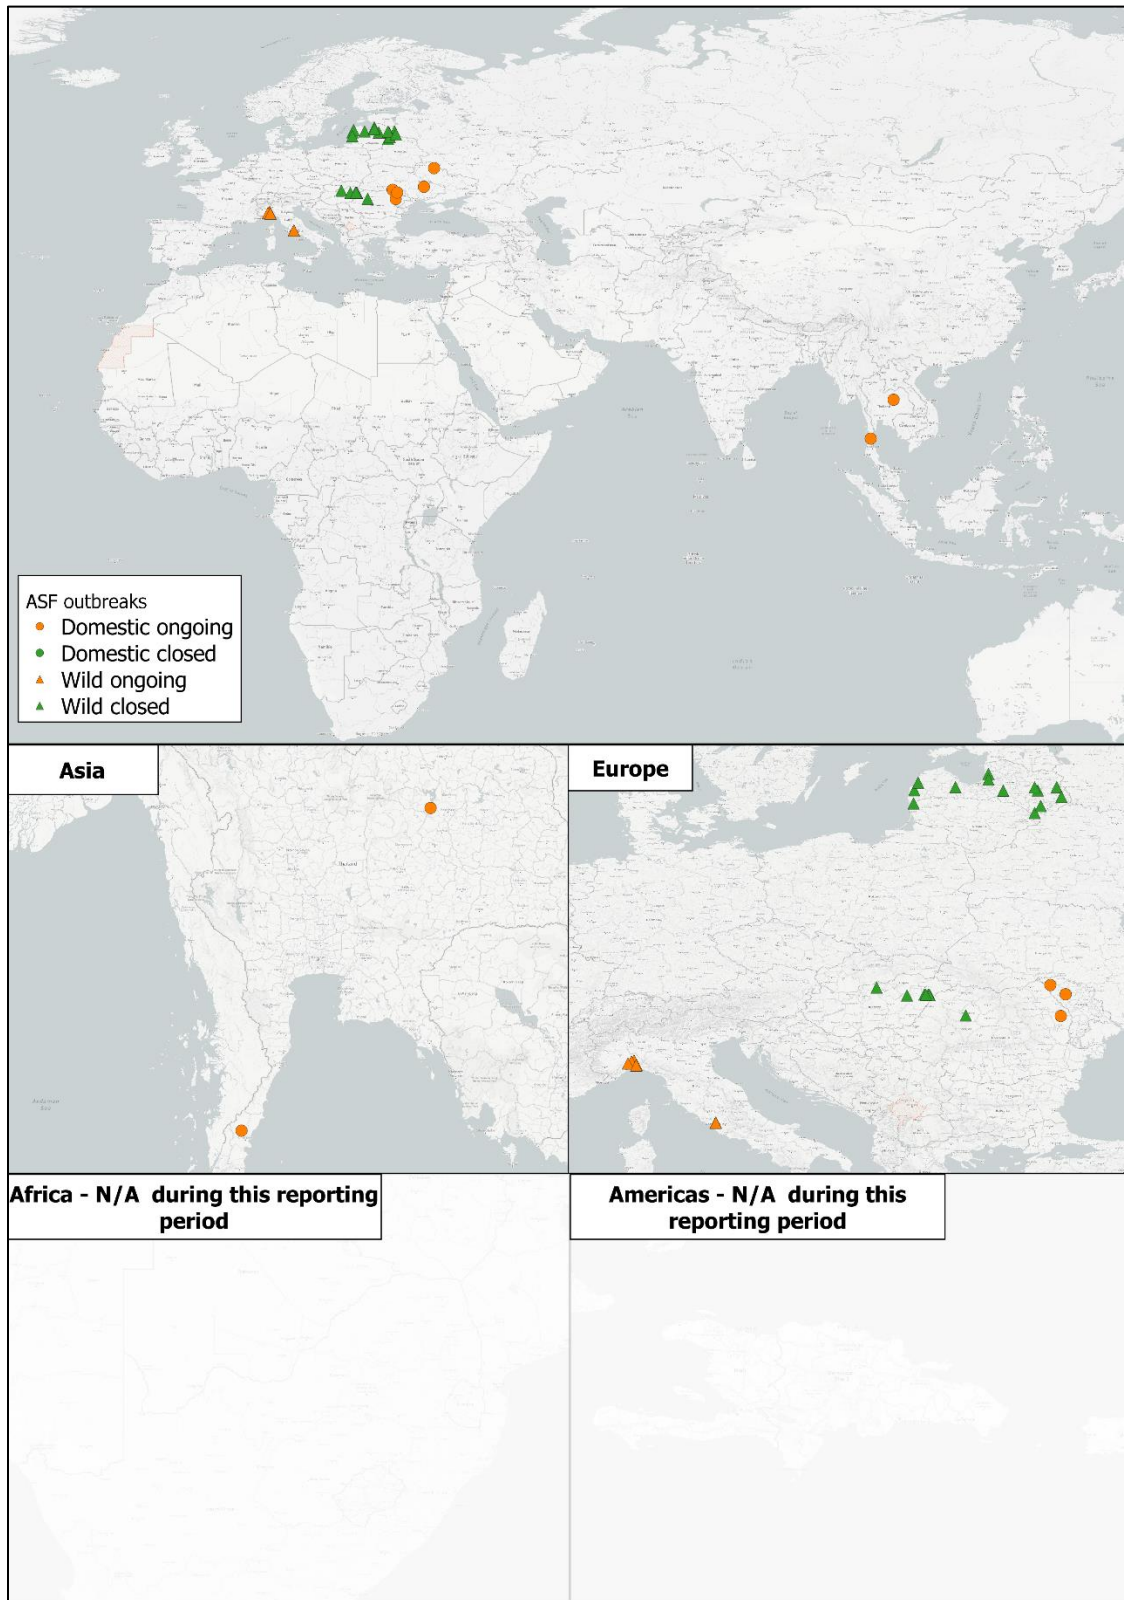

Figure 1: Map of ASF outbreaks which started during 10 June – 23 June 2022 in domestic animals and wildlife. Zoomed views of areas where updates occurred in the last period are provided as well.

## Summary of the ASF situation by world region (2020-2022)

Globally, since 2005 and as of 23 June 2022, ASF has been reported in a total of 74 countries.

Globally since n 2020- and as of 23 June2022, ASF has been reported in 45 countries (Figure 2).

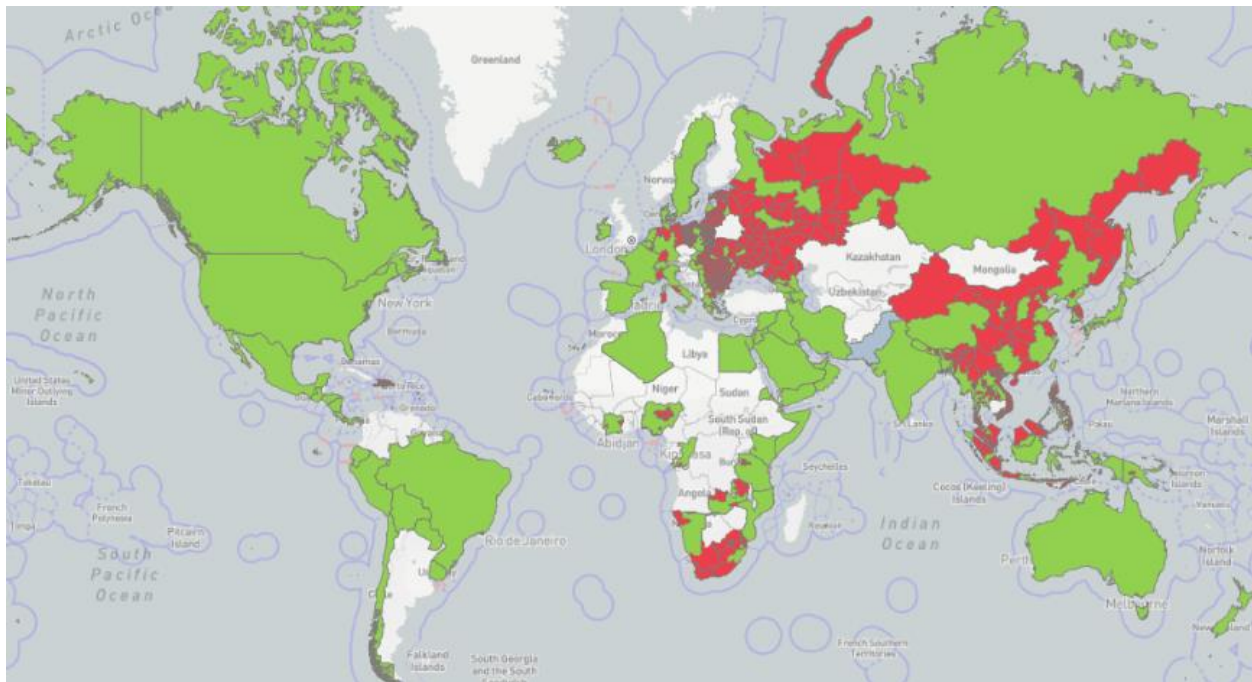

Figure 2. Map of the world displaying the presence of ASF by Administrative divisions (2020 – 23/06/2022)

In total, since January 2020 ASF has been reported as present in five different world regions in 39 countries, affecting more than 1,119,000 pigs and more than 35,500 wild boars (data reported through INs and FURs), with more than 1,880,000 animal losses. Further details, split by world region are included in Table 1.

Table 1: Summary of the number of outbreaks, cases and animal losses caused by ASF in the different world regions since January 2020 (data reported through INs and FURs – these figures cover only epizootic situations while additional information reported through SMR for enzootic situations are not included here because of submission delays).

	Outbreaks		Cases		Losses*
	Domestic pigs	Wild boar	Domestic pigs	Wild boar	Domestic pigs
<b>Africa</b>	179		14,498		21,529
<b>Americas</b>	255		9,567		17,766
<b>Asia</b>	1,272	2,098	97,175	2,757	437,081
<b>Europe</b>	3,536	19,586	997,951	32,778	1,409,104
<b>Oceania</b>	4		500		397
<b>Total</b>	5,246	21,684	1,119,691	35,535	1,885,877

\*Losses (deaths + animals killed and disposed of): this figure refers to losses in the establishments affected by the outbreaks and it does not include the animals culled in areas around the outbreak for controlling the disease.

### **Key messages and Recommendations**

- Since January 2020, 10 countries have reported ASF as a first occurrence in the country, while 13 countries reported its spread to new zones. In 2022 alone, 4 countries reported the first occurrence of ASF and 4 countries reported the first occurrence in a zone. This highlights a continuous spread of the disease into new countries, and new zones in countries already affected.
- This spread confirms the global threat of the disease and highlights the importance of implementing biosecurity measures, an early reporting and response system, and maintaining a high level of disease awareness among all actors involved in the value chain.
- WOAHP encourages Veterinary Services to remain vigilant and implement science-based international standards and guidelines in their national disease prevention and control programmes and urges Members to only use vaccines if they have proven effectiveness and safety.
- Surveillance programmes, as part of an early detection system, should be adapted to the local epidemiological context and cover domestic, and wild and feral suid populations (if they are involved) since short-distance transmission of ASF seems to depend largely on the wild boar population density and their interaction with low-biosecurity pig production systems. Long distance transmission may be associated with human activities.

- WOAH urges its Members to continue to promptly notify the occurrence of ASF and to share the relevant epidemiological information that can facilitate transparency and assist the global control of the disease.
