

Dr Alexander Toto

Alexander graduated as a veterinarian from the University of Zimbabwe in 1995. He holds a postgraduate qualification in Marketing and is studying towards an MSc in Animal Health and Production with the Royal Veterinary College, University of London. Since graduating Alexander has been a participant in a broad tapestry of experience as a veterinarian ranging from general private practice, animal health and production advisory services, field research, public veterinary service and commerce. In the past four years he served as the national project coordinator for the development and implementation of Namibia's livestock identification and traceability system including technical assistance to the Farm Assured Namibian Meat, a quality assurance scheme. Alexander has provided consultancy expertise in a number of assignments as an international consultant in animal identification and traceability information systems. He serves on ICAR-FAO's international task force on animal recording in developing countries.
