So where's the shift?

Animal Welfare in Focus

- Less attention on the “negative”
- Less work on older, traditional indicators
 - Cortisol
 - Behavior
 - Aggression
- More attention on the “positive”
- More work on newer, refined indicators and/or “easier” ways to collect data
 - Emotions
 - Play
 - Technology

So where's the shift?

Animal Welfare and the “Big Picture”

- Animal welfare continues to be an important societal concern
- Animal welfare is accessible and interesting to the public
- “Animal Ambassadors”
- Increasingly, animal welfare is integral part of greater societal concerns

WORLD ORGANISATION FOR ANIMAL HEALTH
Protecting animals, preserving our future

How do the trends in science and public concern complement with OIE Recommendations for Animal Welfare?

Key wording in OIE's definition:

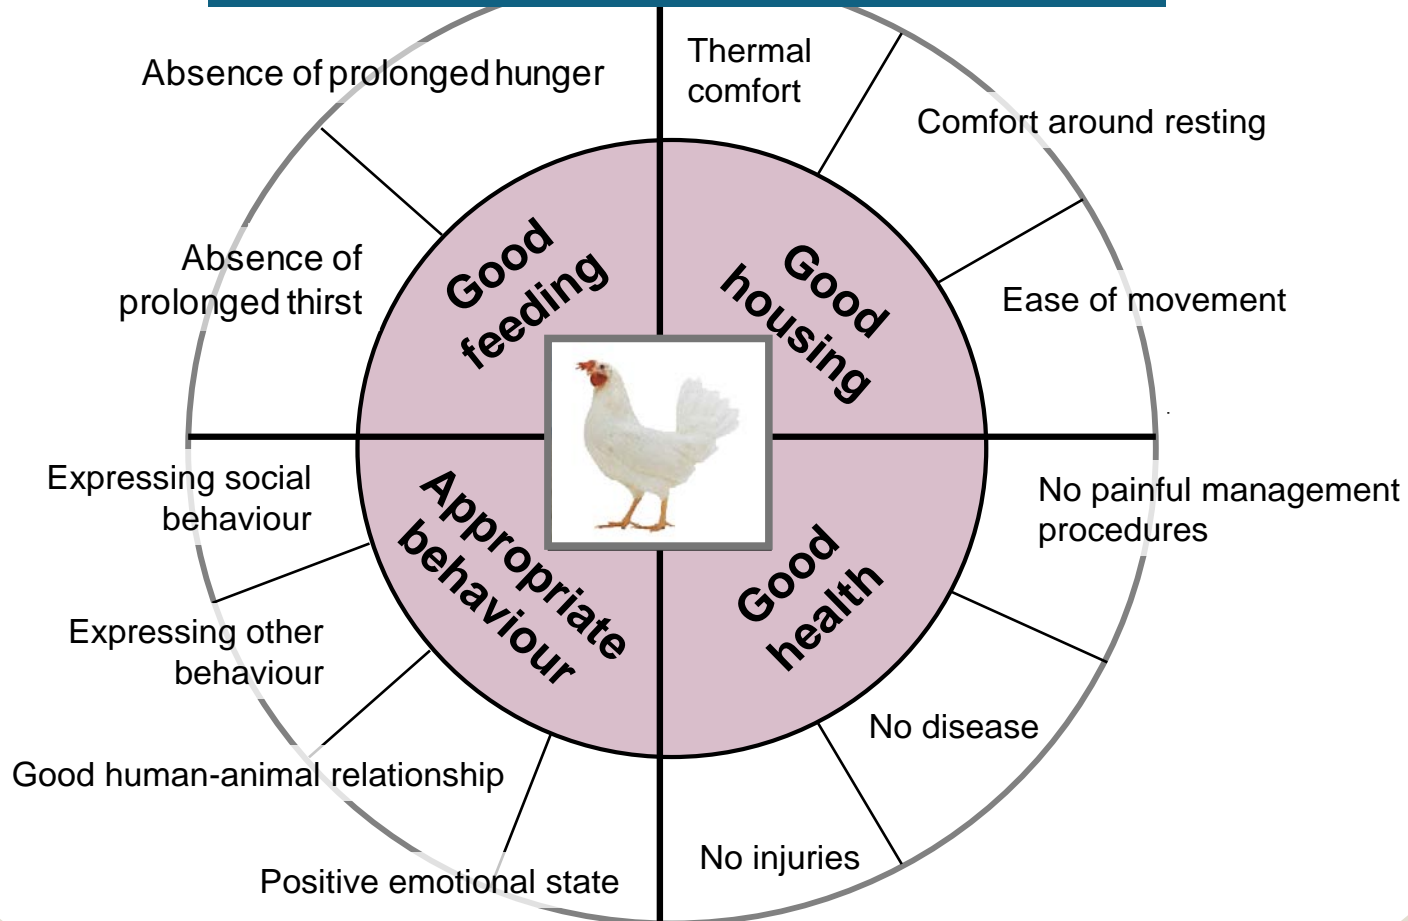

- Animal welfare means how an animal is coping with the conditions in which it lives
- An animal is in a good state of welfare if it is:
 - Healthy
 - Comfortable
 - Well-nourished
 - Safe
 - Able to express innate behavior
 - Not suffering from unpleasant states such as pain, fear and distress
- There is more focus on the animal itself: animal-based measures

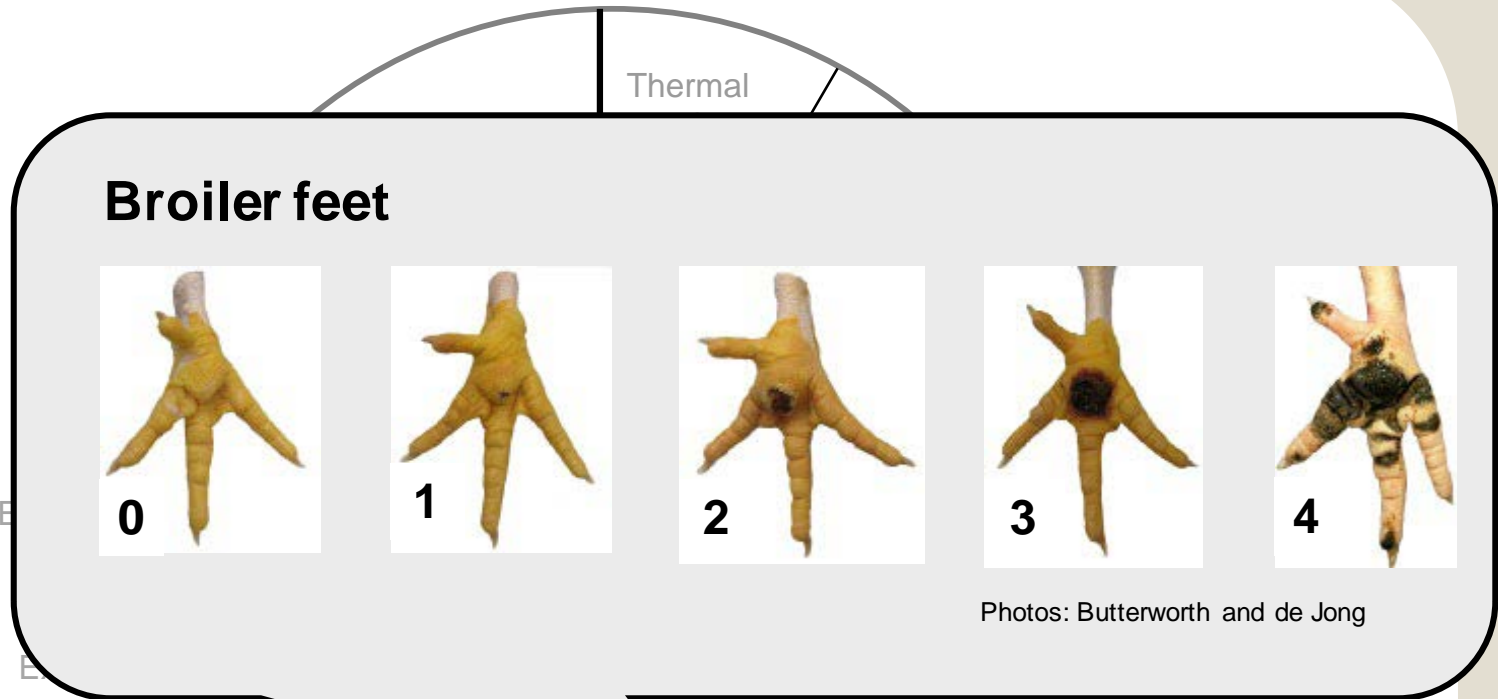

The Welfare Quality[®] System

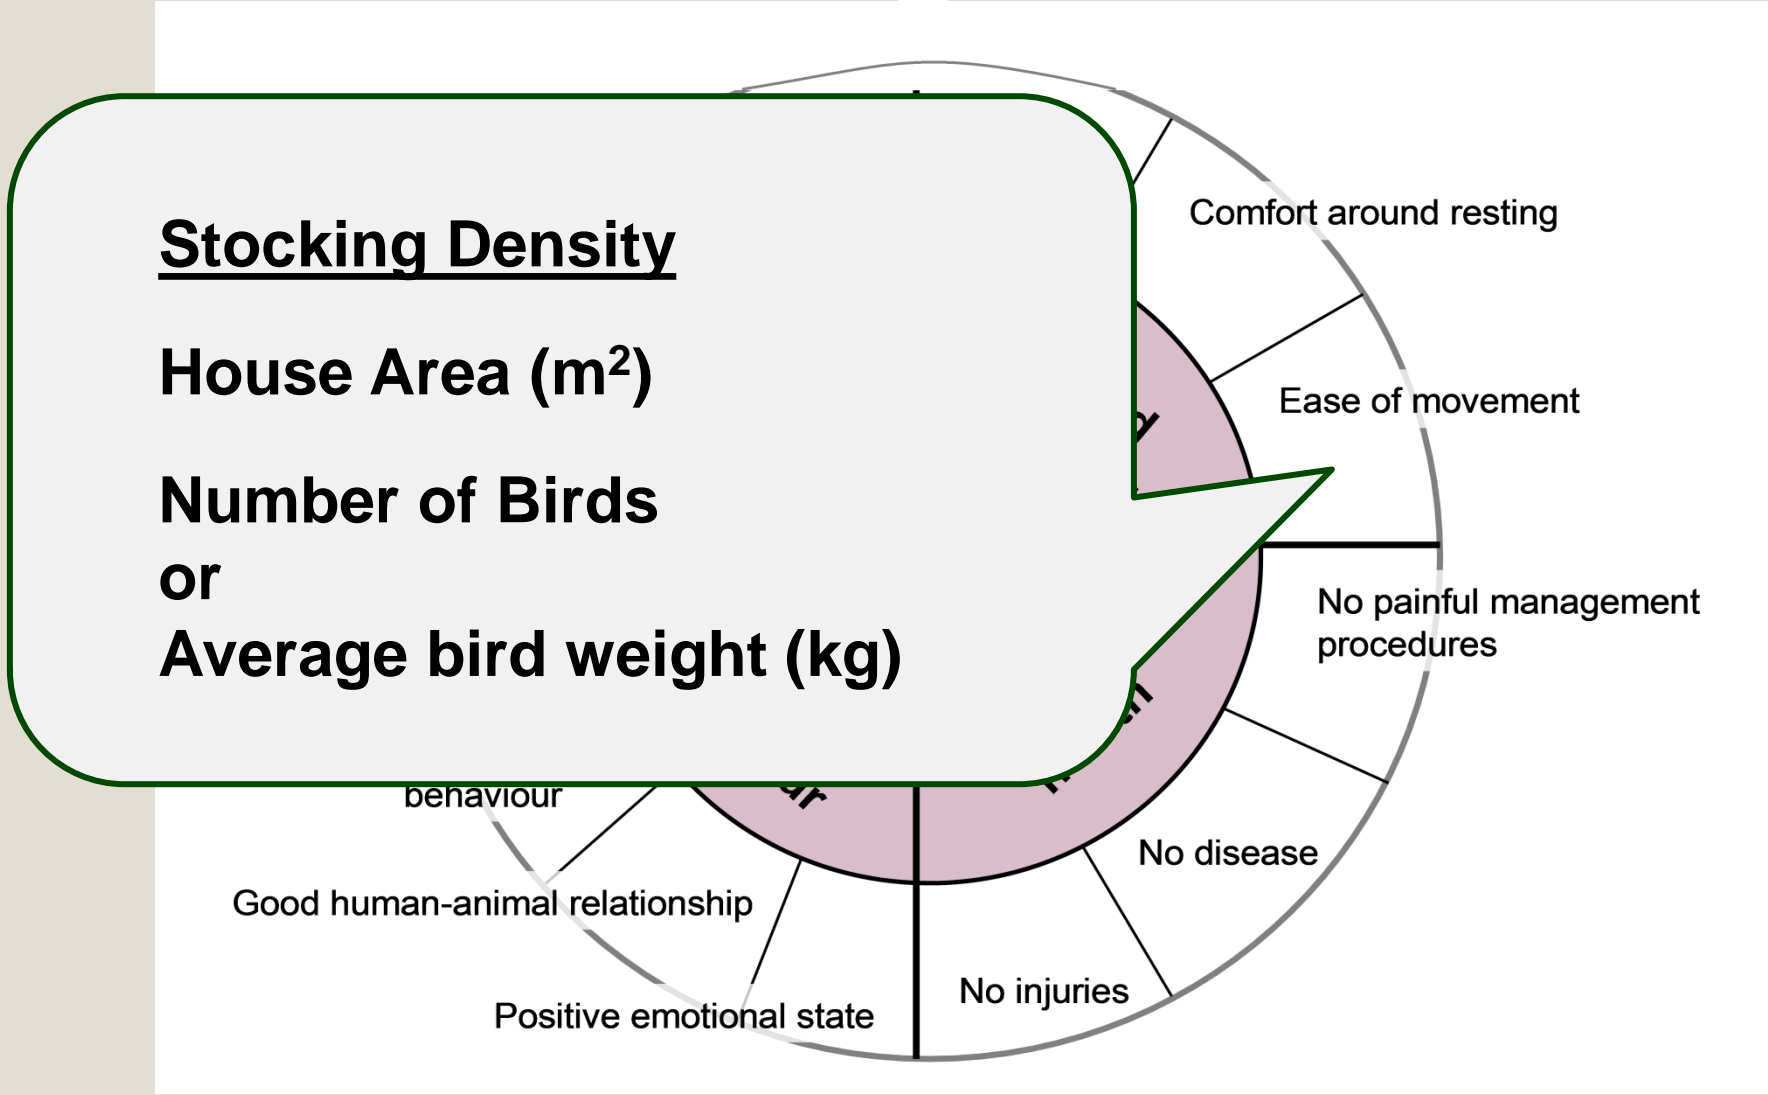

Four principles and 12 criteria

Animal based measures

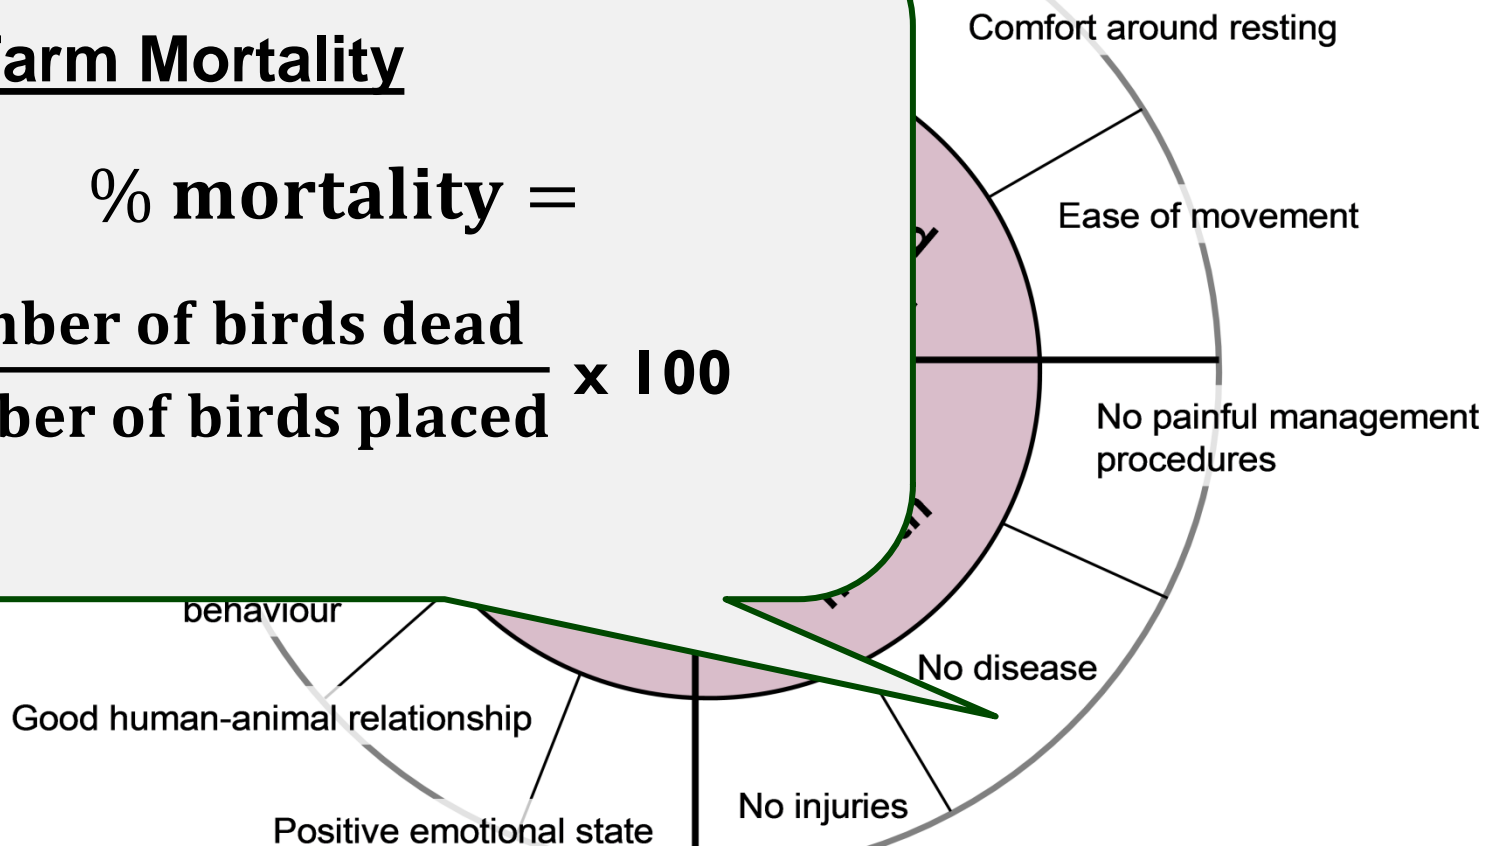

Resource based measures

Management based measures

On Farm Mortality

$$\% \text{ mortality} = \frac{\text{Number of birds dead}}{\text{Number of birds placed}} \times 100$$

Welfare Assessment

Technology/Automation

On farm

- Major European Union project on Precision Livestock Farming (EU-PLF) just completed, led by Daniel Berckmans
 - <http://www.eu-plf.eu/>
- Focused on pigs, dairy cattle and broiler chickens

Data collection

Smart Farming for Europe

Value creation through Precision Livestock Farming

SU Grant Agreement no. 1 211822

PLF applications

1. Early warnings based on camera observations
2. Risk factor for leg problems
3. Human – Animal relationship
4. Sound monitoring
5. Emission reduction

Smart Farming for Europe
Value creation through *Precision Livestock Farming*

EU Grant Agreement no. 311825

eYeNamic: Distribution

Smart Farming for Europe

Value creation through Precision Livestock Farming

EU Grant Agreement no.: 311926

eYeNamic: Activity

Smart Farming for Europe

Value creation through **Precision Livestock Farming**

EU Grant Agreement no. 311035

eYeNamic Early warnings

Farmer takes action:
removing feed blockage

Smart Farming for Europe

Value creation through *Precision Livestock Farming*

EU Grant Agreement no.: 311925

Technology

- Quantify health and welfare status of turkey flocks in a standard, science-based way
- Statistics tool allows users to compare results to previously evaluated flocks
- Housing and husbandry practices can be linked to bird performance, health and welfare

Technology/Automation

On farm

- Herd/Flock/Building level monitoring technology
- Some individual animal monitoring technology
- Some assessment tool technology

How do we facilitate:

- Development of new technology
- Application of technology used in other fields

WORLD ORGANISATION FOR ANIMAL HEALTH

Protecting animals, preserving our future

Need for technologies that are:

- Low cost
- Flexible/adaptable
- Low energy
- Robust
- Automatic?
- User input?
- Resource-based measures?
- Animal-based measures?

Discussion!
